# SUPERIOR CRUMBLER DESIGN

The Bliss Crumbler is specifically designed to be installed below counter-flow coolers. The reversible pocket feeder enables the rolls to be by passed without moving the rolls or the roll adjustment.

The pocket feeder turning one direction feeds the product directly into the nip of the rolls. Reverse the feeder and product by passes the rolls without moving the rolls or the roll adjustment.

The Bliss Crumbler is built with a low profile design for easy placement and installation. The rolls are held in place by compressed air to eliminate the "bouncing spring effect" on the rolls. The Bliss Crumbler is manufactured in four different sizes with each size incorporating a single stand and double stand configuration.
